

TECHNICAL DATA SHEET

Product Name: Fire Fighting Training Foam

Item Number: H392

Description: Fire Fighting Training Foam combines synthetic wetting agents and fire suppressants in a liquid foam concentrate. It has excellent low temperature stability, remaining fluid to 10 F and can be stored for prolonged periods of time in its original shipping container without change in physical or chemical characteristics.

This product provides foam and penetrating action to smother all Class A fires. On class B fires, its smothering action is coupled with its ability to form an emulsion at the surface of the burning solvent, thus creating a cooling barrier interface between the solvent and the foam.

Directions: Fire Fighting Foam can be used in all types of low, medium, and high expansion equipment, air foam and pressure fog apparatus. It can be used successfully at dilutions of anywhere from 2 1/2- 14:1, depending on the types of fire.

CAUTION: KEEP OUT OF REACH OF CHILDREN.

May cause irritation to eyes and skin. Wear suitable protective equipment. For skin and eye contact, wash skin and eyes with water. If swallowed drink plenty of water. In all cases obtain medical attention.
